OCEAN NETWORKS CANADA'S OCEANS 2.0 DATA MANAGEMENT SYSTEM

Richard Dewey, ONC Director of Science
rdewey@uvic.ca

NORTHEAST PACIFIC MAJOR OBSERVING SYSTEMS

- Government of Canada
- NOAA/IBOS/NANOCS
- Ocean Networks Canada

SOUTHERN BRITISH COLUMBIA INFRASTRUCTURE

OCEANS 2.0 – A COMPREHENSIVE DATA MANAGEMENT SYSTEM

- Initiated in 2001 with VENUS in the Salish Sea
- Followed quickly in 2003 by the addition of NEPTUNE
- Original “Data Management and Archiving System” (DMAS)
- Evolved into Oceans 2.0 by 2009 as NEPTUNE came online.

Mandate:

- Manage all infrastructure systems and sub-systems
- Manage all instrument connections, control, and data flow
- Secure all data acquisition from all distributed sensors
- Manage all the metadata and calibration information
- Prepare the data and metadata for user/client access
- Provide means for users to discover, explore, and acquire data, data products, and metadata.
- Enable publication of innovative research with impact!

Summary | Day | Month

Instruments by Location: Ocean Networks Canada - Pacific

Description: The Pacific region includes the NEPTUNE and VENUS cabled observatories, the Mill Bay community-based observatory, mobile platforms, and a few autonomous stations.

[Click image to enlarge](#)

<p>British Columbia North Coast</p>	<p>Northeast Pacific Ocean</p> <p>Description: The Northeast Pacific Ocean includes marine and coastal waters along the west coast of North America. The NEPTUNE observatory is located in this region.</p>
<p>Salish Sea</p> <p>Description: The Salish Sea includes a network of channels and coastal waters near Vancouver Island. The Salish Sea includes the Strait of Georgia, Strait of Juan de Fuca, Saanich Inlet and Puget Sound. The VENUS and Mill Bay observatories are located in the Salish Sea</p>	<p>Vancouver Island</p> <p>Description: Vancouver Island is located on the west coast of British Columbia. It is enclosed by the inner coastal waters of the Salish Sea and the Pacific Ocean.</p>

Shore Station

Network power and control
“Drivers” talks to instruments (raw)
Scalar data is time stamped, parsed,
converted/derived into variables
Complex data time stamped (raw)
Buffered (up to two weeks)

Extras

Logging in has benefits (save, share, more info, etc.)
All time series have annotation “tracks”
Complex data viewers (active and passive acoustics)
Sandbox local computing environment
Access to entire workflow/instrument management

~200 GB/day
~700 TB

Archiver

Receives data every second from SS drivers
Central SS to ingest/reprocess non-streaming data
Scalar data ingested into Cassandra (Apache) DB
Raw (and complex) archived by a file/AD system
Metadata managed in a PostgreSQL

Seismic/Acoustic

Military/Antelope

IRIS/ONC

User Interface

Graphic User Interface (Oceans 2.0)
Application Programming Interface
ERDDAP, linked directly to Cassandra
Processing required spawns VTM

ONC's Oceans 2.0
